EAA Event Endorsement

The European Acoustics Association (EAA) endorses events that meet its rigorous standards in the field of acoustics. This recognition is extended to National Conferences and thematic gatherings focusing on acoustics, adding value and credibility to these initiatives.

Organizers seeking EAA endorsement should submit an application to the EAA Board, ensuring it reaches us at least six (6) months before the scheduled event date. The application should provide comprehensive details, including the venue, scope, expected number of participants, and a clear articulation of the European added value. If the event is not organized by a National Society, approval from the corresponding Society where the event will be hosted is mandatory.

Following the submission, the EAA Board commits to providing a decision within 30 days. Successful endorsements will be featured in the EAA Newsletter, on the official EAA website, and periodically on the EAA Social Media channels. It's important to note that endorsed events while enjoying heightened visibility, do not entail administrative or financial support from the EAA.

This initiative underscores the EAA's commitment to fostering excellence in the realm of acoustics and providing a distinguished platform for knowledge exchange and collaboration. To explore the endorsement process and submit your event for consideration, please access the application form [on our website](#).

EAA Book Reviews

In our commitment to promote outstanding contributions to the field of acoustics, the European Acoustics Association (EAA) encourages authors seeking

insightful reviews of their acoustic literature to connect with us through our dedicated email: ea@euracoustics.org.

To request a book review, authors can simply send an email expressing their interest and providing necessary details about their publication. The EAA will then diligently match the book with a qualified reviewer, ensuring a comprehensive and constructive analysis.

Once the review process is complete, both the book and its review will be featured on the EAA webpage news section. Additionally, we will share this announcement across our official social media channels, amplifying the visibility of your work within the global acoustics community.

"Acta Acustica united with Acustica" articles in open access

Since 2020, the "Acta Acustica" is published in the "Open Access" format by EDP Sciences and the EAA. The older issues of "Acta Acustica united with Acustica" (1951-2019), published by Hirzel-Verlag and the EAA, were not available on the Internet during a lengthy conversion period.

All articles from 1951 to 2019 are now freely accessible in "open access" format. In the long term, these will be integrated into the new EAA archive "Documenta Acustica Electronica Library" (DAEL), which will be published in a few months. Until then, the articles can be downloaded from the following temporary website:
